

ONTARIO HORTICULTURAL ASSOCIATION SPEAKER REGISTRATION REQUEST FORM

To add your name to our Speaker's List on gardenontario.org please fill in the following form and email to:

Rose Odell at speakers@gargenontario.org

Name: First

Last

Biography:

"Sean owns 'Sean James Consulting & Design'. Named by Landscape Ontario as 2020/2021's Garden Communicator of the Year, gardening has been Sean James' passion and profession for over 40 years. A graduate of Niagara Parks School of Horticulture, a Master Gardener, writer, and teacher, Sean focuses on eco-gardening techniques. He has spoken at events from the Maritimes to Seattle and landscaped from Nova Scotia to California. Sean had the honour of being part of creating the new Ontario Landscape Tree Planting Guide, the Grow-Me-Instead guide, the national Red Seal Occupational Standard, and the Master Gardeners Reference Manual. He has chaired the Environmental Stewardship Committee for Landscape Ontario and the Environmental Committee for the Perennial Plant Association" and fills in for Paul Zammit occasionally on CBC's 'The Gardening Show'.

Please provide a brief description of your qualifications, skills and/or experience

Topic List

For each entry, please list a topic from the list below, a title and a brief description noting any costs, restrictions, i.e. time of year, and any other special requirements.

Choose a TOPIC from the following:

Bulbs/Tuber	Herbs	Propagating
Environment	Houseplant	Pruning
Floral Design Fungi	Native Plants	Vegetables
Gardening	Pollinators	Vegetables Listergerg Car design would be helpful
		weuld be helpful

Торіс	Title	Description
I have a lot of topics - al Hopefully that's ok.	most 40 I think. I'm attaching th	e list and will write in which topic applies.

Files to add to listing:

Please send any pdf documents to market your topics/workshops including the audio/visual requirements form so our societies know what equipment/services are required.

Do you present in Person, on Zoom or both?

In person only – In person and Zoom On Zoom only – In person and on Zoom -

Authorization & Release

- I, Sean James , grant the Ontario Horticultural Association:
 - Use of my photographic images and/or video and/or testimonials in various forms of media, including printed or multi-media materials, to be used by or for the Ontario Horticultural Association to assist in publicity, promotion, marketing and/or educational purposes.
 - Use of my identity or likeness in photographic images and/or video and/or testimonials as described above.
 - The permission to identify me by name and/or society/organization and such identifiers as hometown (if applicable).

Signature: com grances Date: C 2 3 2 3

All speeches run between 45 minutes to 1 hour (with questions anytime) followed by an 'official' question period. For some talks, more in-depth 1.5- and 3-hour versions are available.

Nifty Native Plants II - More Great Options

Following up on Nifty Native Plants, since there were just too many more great options to leave out, this presentation will focus on more great, and often overlooked species that deserve a home in our gardens. We'll also talk about some of the biodiversity these species support, and, for some, care points to make them at home in our ever-more beautiful yards. Interest has exploded in this area of horticulture recently!

NEW! 1/230 10 1/25

An Appetite for Gardening: Incorporating Edible into a Traditional Landscape Many home gardeners (but, sadly few professional landscapers/designers) are looking to grow more of their own food, but why relegate edible plants to the back corner, punishing them like they've misbehaved? "Go sit in the corner. Think about what you've done!" Many fruits and veggies are beautiful and offer wonderful texture and colour; think about eggplant, rhubarb and kale! Growing vines (beans, squash, tomatoes) on trellises and espaliering fruit trees can also be a great way to use vertical surfaces to embiggen your landscape and fill the pantry at the same time! We'll discuss all options!

NEW!

Fusion® Gardening II - Dive Deeper

ENVICENME

Following the success of 'Fusion[™] Gardening', it's time to get into more of the how-to details, such as testing for soil type, how to *actually* <u>construct</u> a rain garden, governing flow and capturing every rain drop possible through a variety of methods, how to build specialized drought-tolerant gardens such as 'scree gardens', and more!

(ac 10 mm ~ 9

20+ Bulletproof Plants

Gardening can be challenging. We'll look at different situations and which plants thrive in them. (The original request was for 20 plants, but it couldn't be kept to only that number!)

Folks think that certain circumstances are challenging. The truth is one needs to know the right plants.

P. Ilinator NEW!

Designing and Building a Butterfly Garden (& getting it off to a good start!)

It takes a while to get things off the ground – butterflies AND gardens. This is the story of the creation of the new Val Fleming Butterfly Garden in Beamsville, from beginning to end, first meetings, through design, Redesign, installation, bumps along the road, and maintenance/establishment. Essential for those who're thinking of creating a butterfly garden, or a biodiversity support garden in general.

Flowers for Feathered Friends 6 c c c c c c c y

Gardening to attract birds can be mixed with any other kind of gardening, but requires a few specific considerations. It also has benefits to your landscape beyond the joy of birdsong. This is a talk for more than just birders, covering concepts such as biodiversity and native plants.

Nova Scotia Summer: A Horticultural Epic Tour

Summer, 2016, and the Fern Ridge Gang went to Guysborough, NS to install an eco-landscape, came back, and went down and came back... and so on. This resulted in upgrading an incredibly biodiverse 120-year-old mill pond. Along the way, we visited a litany of botanical gardens... and more.

Keeping it Green: Keeping it Beautiful EAVICAN

It is one of my fundamental beliefs that whatever your sustainable palette – permaculture, native plantings, rainwater handling etc. – beauty should be the starting point. If we don't make these initiatives beautiful, folks won't buy in.

This is an in-depth talk on design principles and discussing several 'green' gardening techniques.

Growing Gracefully:

The Evolution (Creation?) of a Garden from Young to Mature

Like a battle plan, a garden design doesn't last past the first shovel in the ground. Gardens evolve, year after year. Plants over-thrive, while others die. Shade pushes out sun-loving plants as trees mature. We'll look at how this progression happens and how to embrace it. A large and frequently-overlooked topic.

NEW

Texture Workhorses: Sedges and Grasses

Only recently appreciated, grasses offer interest throughout the year, increase biodiversity and offer sound and movement. Their close relatives, sedges, are indispensable in the fast-growing area of rain Design /Environment gardens. Horizons will be broadened!

Fusion[®] Gardening

Encouraged by many municipalities and regions, Fusion Gardening[®] blends LID (rainwater handling) with xeriscaping (drought-tolerant gardening) and enfolds plantings to enhance biodiversity. One of the main foci of this style is to engage the public with *beauty*. Since it's so important that property owners take up this gauntlet, we'll address the backbone of each of these disciplines, and discuss how to do each artfully. With climate change, storms are becoming stronger and less predictable. Droughts are getting longer. Many of us seek to use our gardens to do 'Good' for biodiversity. Fusion Gardening[™] does all these things by minimizing water use, keeping the water that falls on our property ON our property, and, through the favouring of native and wildlifesupporting plant choices, support the life that visits our yards."

Simply Shrubs! Native Plants

Today's gardener is searching for more eco-friendly planting designs, and you can become that expert! Focusing on native plants and nativars (cultivars of native plants), we'll talk about some of the best shrubs for all types of gardens from rain gardens through shade and sun and look at tolerance to soil types as well.

B4 Gardening: Beautiful Blooms for Birds and Bees

We LOVE butterflies in our gardens, and we recognize that bees, upon which our food supply depends, are under stress. Any garden can be a pollinator garden and we'll discuss how, with a brief discussion about pollinators themselves.

A broader picture than "Flowers for Feathered Friends", this talk also covers attracting pollinators and other desirable wildlife to the garden. This ties into how biodiversity will benefit your garden...and how incredibly beautiful it can be.

f NVICE CALL

What to do With a Downpour: Ornamental Ways to Handle Rainwater

Urban development has resulted in large areas of impermeable surfaces. This leads to poor water quality and erosion as well as drying of the creeks during droughts. Techniques will be discussed to aid in infiltrating rainwater into the soil while beautifying your landscapes and allowing a more unusual palette of plants to be used. Rain gardens can be a beautiful addition to any yard and can allow the planting of some truly interesting plants. They also help the environment by infiltrating water to clean it and restore the water table and base-flow (the water that seeps through the ground to our creeks). We'll cover how to design and build a rain garden, including placement, construction, and plant choices.

Working WITH Nature

- a common-sense approach to avoiding pesticides in the garden
- how to let nature do the work by encouraging soil health, biodiversity, and proper plant care
- just a few slides and lots of information and answering of questions $\mathcal{P}\left(\alpha\cup\tau^{*}\right)$

Nifty Native Plants Alative

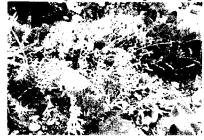

Why do we think that going native means a sacrifice in beauty? It does **not**! We'll discuss various desirable ornamental natives, including some you may not know as native, and their benefits to birds and pollinators. Location suitability will be dealt with, including addressing difficult soils and situations. We may even get into the debate on 'Nativars'! One of the most popular speeches!

Go Van y

Xeriscaping: The Necessary Wave of the Future

Many gardeners think drought-resistant landscaping needs to look like a desert. It CAN (and that would be pretty cool!) but it doesn't NEED to. Selecting plants for sun or shade that aren't thirsty still allows a large pallette of species that are surprisingly low-maintenance. We will cover different gardening techniques such as drip irrigation, as well as styles of landscaping such as scree gardening.

Making a Splash: Water in the Home Garden

- design, construction, & maintenance of water features
- less work than you think...no weeding & no mowing!
- plant choices
- plus, a bit about rain garden construction

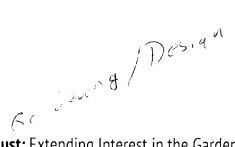

Vegetables

Looks Good Enough to Eat! Permaculture: Living off YOUR Land

- the basic principles of growing food on your property
- creative solutions for city yards
- keeping it ornamental
- using edible natives and perennials to be eco-friendly

It Doesn't End in August: Extending Interest in the Garden

- a study, month by month, from September to December and beyond
- combinations and individual plants
- breaking down the belief that the spring garden is the climax, and the rest of the year is the denouement

- Fall Cleanup: The Green Way Updated 60 January · addressing the many misconceptions about what to do in the fall
 - labour-saving techniques
 - extra information about biodiversity and general horticulture

Fighting the Triffids: Native Alternatives to Invasive Ornamentals

We love plants, but some of the plants we love are a bit too enamoured with our natural areas. They're not native to Canada and they move aggressively into our wild spaces. There ARE nonnatives that are fine in our gardens! We'll talk about which plants we'd like to avoid and some better options – native and non-native, non-invasive – that might be better options. We'll also touch on how to control some of the aggressors. How invasives affect our biodiversity will also be addressed. Gerand

English Cottage Gardens: A Canadian Approach

- an in-depth presentation of design principles, matching plants to soil, and planting combinations
- slide presentation of perennials and examples of cottage gardens even shady!

Design

Rocks, Blocks & Wood: Understanding Hard Landscaping

- using stone, wood, and interlock in the landscape
- common mistakes
- heavy focus on design principles
- dealing with contractors

The Devil's in the Details:

Landscaping a Small Yard... Some Design Tips from a Pro

Small yards, in many ways more than large yards, have great potential. A short slide show will be analyzed to share ideas and help guide you.

Drung

Proud of My Pruning

- Become a pruning hero and learn the methods and science of pruning, including what NOT to do, where to make proper cuts for healing, (and a possible video demonstration for Zoom).
- how to prune woody ornamentals shrubs to trees young and old
- an in-depth pruning demonstration of how to make proper cuts and maintaining aging shrubs
- a short discussion on identification of diseases and how to deal with them
- how much to prune, specialty pruning methods, such as pollarding and coppicing, WHEN to prune and long-term concerns
- Everyone needs to hear this but may not know it.

Bringing Back the Nearly Dead: Renovating an Existing Landscape

- dealing with a landscape afflicted with the usual challenges, step-by step
- Starting with a standard landscape, we erase those challenges and redesign the situation.
- how to use the existing material & assets when upgrading older landscapes
- design principles and construction priorities & winter interest
- rejuvenative pruning techniques
- principles of hard landscaping (using stone, concrete & wood)

Gardonag

Close Companions: Using Perennials and Annuals Together

- discussion on how to keep colour in your garden through the entire season
- keeping costs and maintenance low
- using colours together
- using bulbs, tender perennials (e.g., Dahlias) and self-seeding annuals, with perennials

Gordaning

Reduce Your Maintenance: Groundcoders & Mulches

No one calls a landscaper looking for something, 'sorta... Palace of Versailles'! The first request is usually 'low maintenance'. The best and most visually-appealing way to reduce work is by using mulches and groundcovers. We'll discuss a variety of both, their pros and cons and how to design with them. We'll also touch on natives and biodiversity enhancement, which are becoming major interests. The soil microbiome will be included.

Gordoning)

Practical Perennials

We focus on 50 or so perennials that provide easy care, long periods of interest, seasonal colour, salt and shade tolerance. We'll also cover how to grow them and spring and fall maintenance, as well as thoughts on designing, growing & winter interest. (This talk is normally an hour and a half, but there's a shorter version available.)

harvening / monther

What We Used to Kill: Caterpillars and Their Host Plants

It wasn't so long ago that if something was nibbling on our plants, we whipped out the insecticide. In recent years there has been an explosion of interest in pollinators, including butterflies and moths. Folks frequently seek advice on how to identify various caterpillars, larvae and other insects. Equally important is how to enhance our gardens to provide habitat for these creatures. Host plants and garden maintenance will be topics of discussion.

The Art of Lighting

ing ______ so much work into the landscape why i

Design

- if you've put so much work into the landscape why not enjoy it at night... when you are home?
- different types and styles of lighting the landscape with a focus on low-voltage fixtures
- what to look for and how to deal with contractors
- the potential negative effects on lighting

Gouven ng

Couples and Threesomes: Companions for Hostas

Utilizing the potential of a shade garden

- an in-depth look at using more than just Hostas to bring all aspects of garden design to a shade garden
- includes discussion of biodiversity and sustainability

Talk Dirty: Soil, and the Things Living in it

We are continuously learning about soil and its importance to plant health and climate change. The latest information and research will be discussed. We will present and answer several trend-setting questions. How do we steward the soil microbiome? What are the beneficial bacteria and fungi? What activities harm the soil and therefore the plants? Can better soil stewardship also mean lower maintenance? It's a dirty topic, but someone's got to cover it.

Catching a Garden: Photography Tips for Real Gardeners

- not high tech! Just a simple look at how to photograph nature and more
- I am a semi-professional (just a bit in my spare time but I have sold works and done paid shoots)
- we will NOT discuss f-stops and aperture sizes and all that...it's not usually necessary with today's cameras
- we will discuss composition, colour, form and perhaps a few useful tricks

Gordon ng

A Pillar of Salt... and Plants that Tolerate It

- designing and planting for roadsides, sea sides, and other salty conditions
- with boulevard gardens gaining ground but slip and fall insurance claims on the rise, choosing plants that can tolerate salt is of particular interest to gardeners and municipalities alike
- restrictions on boulevard gardens will be discussed
- touching on how these plants often support biodiversity

Design Environment reating

Life-Magnet: Creating a Layered Native Garden for Biodiversity:

With the expanding trend toward landscaping to enhance <u>all</u> forms of life, the question becomes...how. By choosing plants favouring native species, and creating layers including varying heights of plants, focusing on what food and habitat niches those plants would fill, the life cycles of many species can be supported. This involves looking at all life stages: from birth (larva and eggs) to adulthood; and from first food sources to berries and insects. Also worth considering is where creatures need shelter; old logs, standing trees, twiggy shrubs for nesting, and more. We'll delve into recommended plant choices, design considerations, the 'native vs. non' issue, and finer details such as supporting obligat feeders (those that can feed on only one genus or species).

Consider offering a course to your membership or the general public. Stack several speeches together or choose more in-depth/longer presentations from the courses below.

Hire me for the day, offer lunch (when we did this for Oakville Master Gardeners many moons ago, a local Subway donated lunch) and charge participants to raise money for garden projects or just top up your organization's coffers. As with any of the talks above, I'll promote your group through my newsletter and social networking platforms. Catocaity

Woody Plants: Their Appeal and Uses in the Landscape (Full Day)

- a 6-hour presentation of the advantages and concerns surrounding woody plant choices
- includes discussion of plants suitable for rain gardens, attracting birds, invasive species, B Gar Jening native species, hardiness zones, and suitability to soil type

Dig Deeper: Landscape Plants and How to Use Them (Full Day)

- a 6-hour presentation on various types of plants: annuals, perennials, trees, shrubs and even veggies
- design considerations will be addressed throughout
- includes discussion of invasive species, plants suitable for rain gardens, attracting birds, native species and suitability to soil type

Do-it-Yourself: A Design Workshop (Full Day)

The morning will involve a presentation on all aspects to be considered to create a landscape design: construction basics; prioritizing needs; aesthetic principles. Afternoon will be spent working with participants, one on one, to help them create their design.

Participants should bring a design of their property, preferably measured to scale, photos of their house and garden, paper (11x17 is best), a ruler or scale, pencils and erasers (or the host group can provide stationery and supplies).

Typically, the host group provides a simple lunch to participants – maximum of 12 participants.

Xeriscaping: Drought-tolerant Landscaping (Half Day)

With municipalities beginning to charge what water actually costs, and with an increasing awareness of environmental issues, this is a valuable presentation. Plant choices, whys and hows, and different styles will be discussed.

This is a 3-hour workshop on all aspects of reducing water use in the landscape.

Garden Design

Ornamental Ways to Handle Rainwater

Want to know most of what there is to know about this important topic? Think you can sell tickets and make money for your group, or just think it's important enough to make it an 'event'? Urban development has resulted in large areas of impermeable surfaces, leading to poor water quality and erosion, as well as drying of the creeks during droughts. Techniques will be discussed to aid in infiltrating rainwater into the soil while beautifying your landscapes and allowing a more unusual palette of plants to be used. Rain Gardens can be a beautiful addition to any yard and allow the planting of some truly interesting plants. They also help the environment by infiltrating water, restore the water table and base-flow (the water that seeps through the ground to our creeks). This process also helps clean the water of particulate matter and chemical pollution. We'll cover how to design and build a rain garden, including placement, construction, and plant choices.
